How inflation eats into your returns

Food price comparison

	1989	2019
White sliced loaf	*49p*	*£1.09*
Chicken (fresh / per kg)	*£1.89*	*£2.77*
Milk (per pint)	*28p*	*44p*
Oranges (each)	*17p*	*38p*
Draught lager (per pint)	*£1.06*	*£3.69*

The value of your investments can fall as well as rise, and you could get back less than you invest.

Understanding inflation and its impact on your portfolio is important because rising prices can reduce the value of the money you get back from your investments.

What is inflation?

Inflation is a term used to describe a rise in prices. In the UK, it is measured by the Consumer Prices Index including owner-occupiers' housing costs (CPIH), the Retail Prices Index (RPI) and the Consumer

Price Index (CPI). CPI the most commonly quoted measurement tracks the changes in prices of several hundred household goods and services including food, clothing and recreation. The Office for National Statistics publishes CPI figures on a monthly, quarterly and annual basis.

Prices increase for a variety of reasons, such as a rise in the cost of the raw materials used to manufacture goods, or tax cuts which encourage consumers to spend.

In the UK, inflation has drifted above the Bank of England's (BoE) target of 2% since the Brexit referendum as political uncertainty has caused sterling to weaken against other major currencies. Weaker sterling means goods imported from outside the UK become more expensive.

Most other major central banks set a similar target because a healthy level of price rises reflects a strong economy. If inflation races ahead for any reason, the banks can use interest rates to get it back under control.

Why does inflation matter to investors?

Inflation reduces what is known as your purchasing power. In short, when prices rise, you can buy less with your money. This effect does not just impact your day-to-day spending though, it also eats into the returns generated by your investments.

Say your portfolio increased in value by 5% in a year. This is your nominal rate of return. However, prices rose by 2% during that time, consistent with the BoE's target. To determine your real rate of return, you need to subtract the inflation rate (2%) from your nominal return (5%). In this case, the value of your portfolio increased in real terms by 3%.

Inflation proofing your portfolio

An investment portfolio should ideally be designed to deliver returns that beat inflation over the long term (five to ten years), even if it does not achieve this aim consistently throughout the whole investment period.

Bonds play an important role in the diversification of risk in your portfolio, but they may underperform when prices rise because payments become worth less. Fixed interest payments received by bond investors stay the same regardless of inflation, while equity investors earn a variable return which they expect, to some degree, to reflect changes in inflation. Alternative asset classes such as commercial property and commodities might also benefit from rising prices. Conversely, with interest rates at record lows since the 2008 financial crisis, holding cash will generate negative returns.

Your pension savings, your future options

Thanks to pension freedoms introduced in 2015, savers over 55 have a wide range of options when it comes to drawing from your savings, and this brings opportunities although it's also easier to make a mistake.

There are now essentially four main ways for you to access your pension savings:

1. **Buy an annuity** which guarantees an income, typically for the rest of your life but in some cases for a fixed period
2. **Flexi-Access Drawdown** allows you to withdraw from your savings when you need to, while the balance remains invested
3. **Take it all out as cash** with the first 25% tax free and you pay income tax at your marginal rate on the rest, although you may face a hefty tax bill the following year
4. **Take part of it out as cash** with the first 25% tax free with the rest taxed at your marginal income tax rate. You can do this as many times as you like until you no longer have any pension savings.

Why you should consider modernising your pension

As well as giving you greater freedom over how you access your savings, there are several other benefits when modernising your pension:

- Take full control of your pension savings
- Choose when and how to draw an income to suit your retirement planning
- Keep your options open for drawing an income in the future
- Optimise your tax efficiency - both on any money you might leave invested, and Inheritance Tax.

If your pension plan does not offer all four of these options, then you should think about switching it.

What else do you need to think about?

There are other factors to take into account when switching to a modern pension.

Firstly, the chances are the costs will increase. You may end up paying as much as an extra 1% of the value of your savings annually. So, if you have saved £200,000, your provider could charge up to £2,000 more per year. And if you seek financial advice, your adviser may also levy a fee, either upfront or as an ongoing service charge. These additional fees eat into your pot, but you could equally benefit from the flexible access as well as greater visibility and control.

Another consideration is tax. Regardless of whether you stick with your current pension or switch to a modern one, your income- other than the first 25% of a partial or whole lump sum- is subject to your highest rate of tax. Seeking professional advice can help you access your savings in a tax-efficient manner.

There is certainly plenty to consider and it is wise to regularly explore your current and potential retirement routes.

The value of investments and any income from them can fall as well as rise and you may not get back the original amount invested.

HM Revenue and Customs practice and the law relating to taxation are complex and subject to individual circumstances and changes which cannot be foreseen.

Information contained in this article concerning taxation and related matters are based on Openwork's understanding of the present law and current legislation.

How will changing working patterns affect your pension?

The sooner you start saving, the healthier your pension pot is likely to be when you need to draw on it.

But what happens to your pension planning if your working hours reduce, or stop?

First things first
If you join a company you may be enrolled into their workplace pension scheme which, in most cases, your employer will also pay into. The self-employed, on the other hand, should set up a personal pension, which come in the form of a basic personal pension, stakeholder pension, or Self Invested Personal Pension (SIPP).

Workplace pension schemes will have minimum contribution levels, but you should save more if you can. In fact, some commentators suggest that if you take the age you start your pension and halve it, that's the percentage of salary you should save each year.

What's more, as your earnings increase it makes sense to save more into your pension if you can afford to. There's no limit on how much you save, but there are limits on the amount of tax relief you'll receive.

What if your working patterns change?
If you reduce your hours your contributions may also reduce, so you'll need to consider how that impacts your retirement planning.

Working part time won't affect your state pension entitlement providing you earn at least £166 per week. Entitlement depends on your National Insurance contribution history and if your part-time earnings are lower than the threshold you might be able to pay voluntary class 3 NI contributions to plug the gap.

If you need to take time off work, you and your employer will carry on making pension contributions if you're taking paid leave. The same applies for maternity and other paid parental leave.

If you're taking maternity leave and not getting paid, your employer still has to make pension contributions in the first 26 weeks of your leave (Ordinary Maternity Leave). Whether they continue making contributions after that will depend on their maternity policy, so it pays to check.

To find out how much your retirement might cost, it's helpful to ask yourself:

- When do you want to retire?
- What do you want from your retirement?
- How will your spending habits change?
- Would you move, or stay in your current home?
- Will you continue doing some form of paid work after retirement?
- Will you be entitled to the full State Pension?

Whether you're employed, self-employed, part time or full time, please get in touch with us to explore your pension planning options.

The value of investments and any income from them can fall as well as rise. You may not get back the amount originally invested. HM Revenue and Customs practice and the law relating to taxation are complex and subject to individual circumstances and changes which cannot be foreseen.

Investing for the next generation

In the early years this might translate into a surplus of toys or days out, but this stage eventually passes and thoughts turn towards the future transition from child to adulthood and beyond.

This longer-term perspective raises the question of how best to provide financial support through, what could be an expensive transition and inevitably this leads to a variety of issues:

- Are there particular needs which should be targeted or is it more important to have money available as and when your child needs it?
- Which investments would be appropriate?
- Is it possible to put some parental or other controls in place for when children can access the investment?
- Which are the most tax-efficient investments?

Investing for life's key events
For today's children, the path through the early years of adulthood might cost rather more than that of their parents - and grandparents:

Higher education may be seen to be more important for gaining a reasonable job, but it also comes at a much higher cost. Taking into account tuition fees, accommodation and living expenses, a three-year degree is likely to cost the poorest students more than £50,000 according to a 2017 Institute of Fiscal Studies report. Before 1998, there were only grants and loans for tuition fees did not begin until 2006. Your generation may have left university with a bank overdraft, but the sum owing probably pales into insignificance compared to the five figure debts faced by today's graduates.

Marriage is an increasingly costly staging post for those who choose it. According to the annual wedding survey by Bridebook.co.uk the average cost of a wedding in 2018 was just over £30,000! Despite the cost, two thirds of couples questioned in the survey admitted to either going over budget or having no budget at all.

Getting on the first rung of the **property ladder** is another growing cost for the next generation. According to research by Halifax, first time buyers are having to find record deposits, with the national average exceeding £33,000. It's no surprise people are having to leave it until later to buy their first home.

Once they have the degree, the job and the home (and the mountain of debt), there's another long-term financing requirement which today's children will encounter: **retirement provision**.

Take expert advice

Two principles that apply to many aspects of financial planning are particularly relevant when thinking about children:

1. The sooner you start the better, and the more scope there is for investments to grow (although there's still no guarantee that they will).

2. Take expert advice before making any decisions. The right investment set up in the wrong way can be worse than the wrong investment set up in the right way. DIY planning is not to be recommended, given the potential pitfalls.

If you want to help your child progress through this financial landscape, please get in touch.

The value of your investments and any income from them can fall as well as rise and you may not get back the original amount invested.

Reviewing your pension contributions

Did you know...?

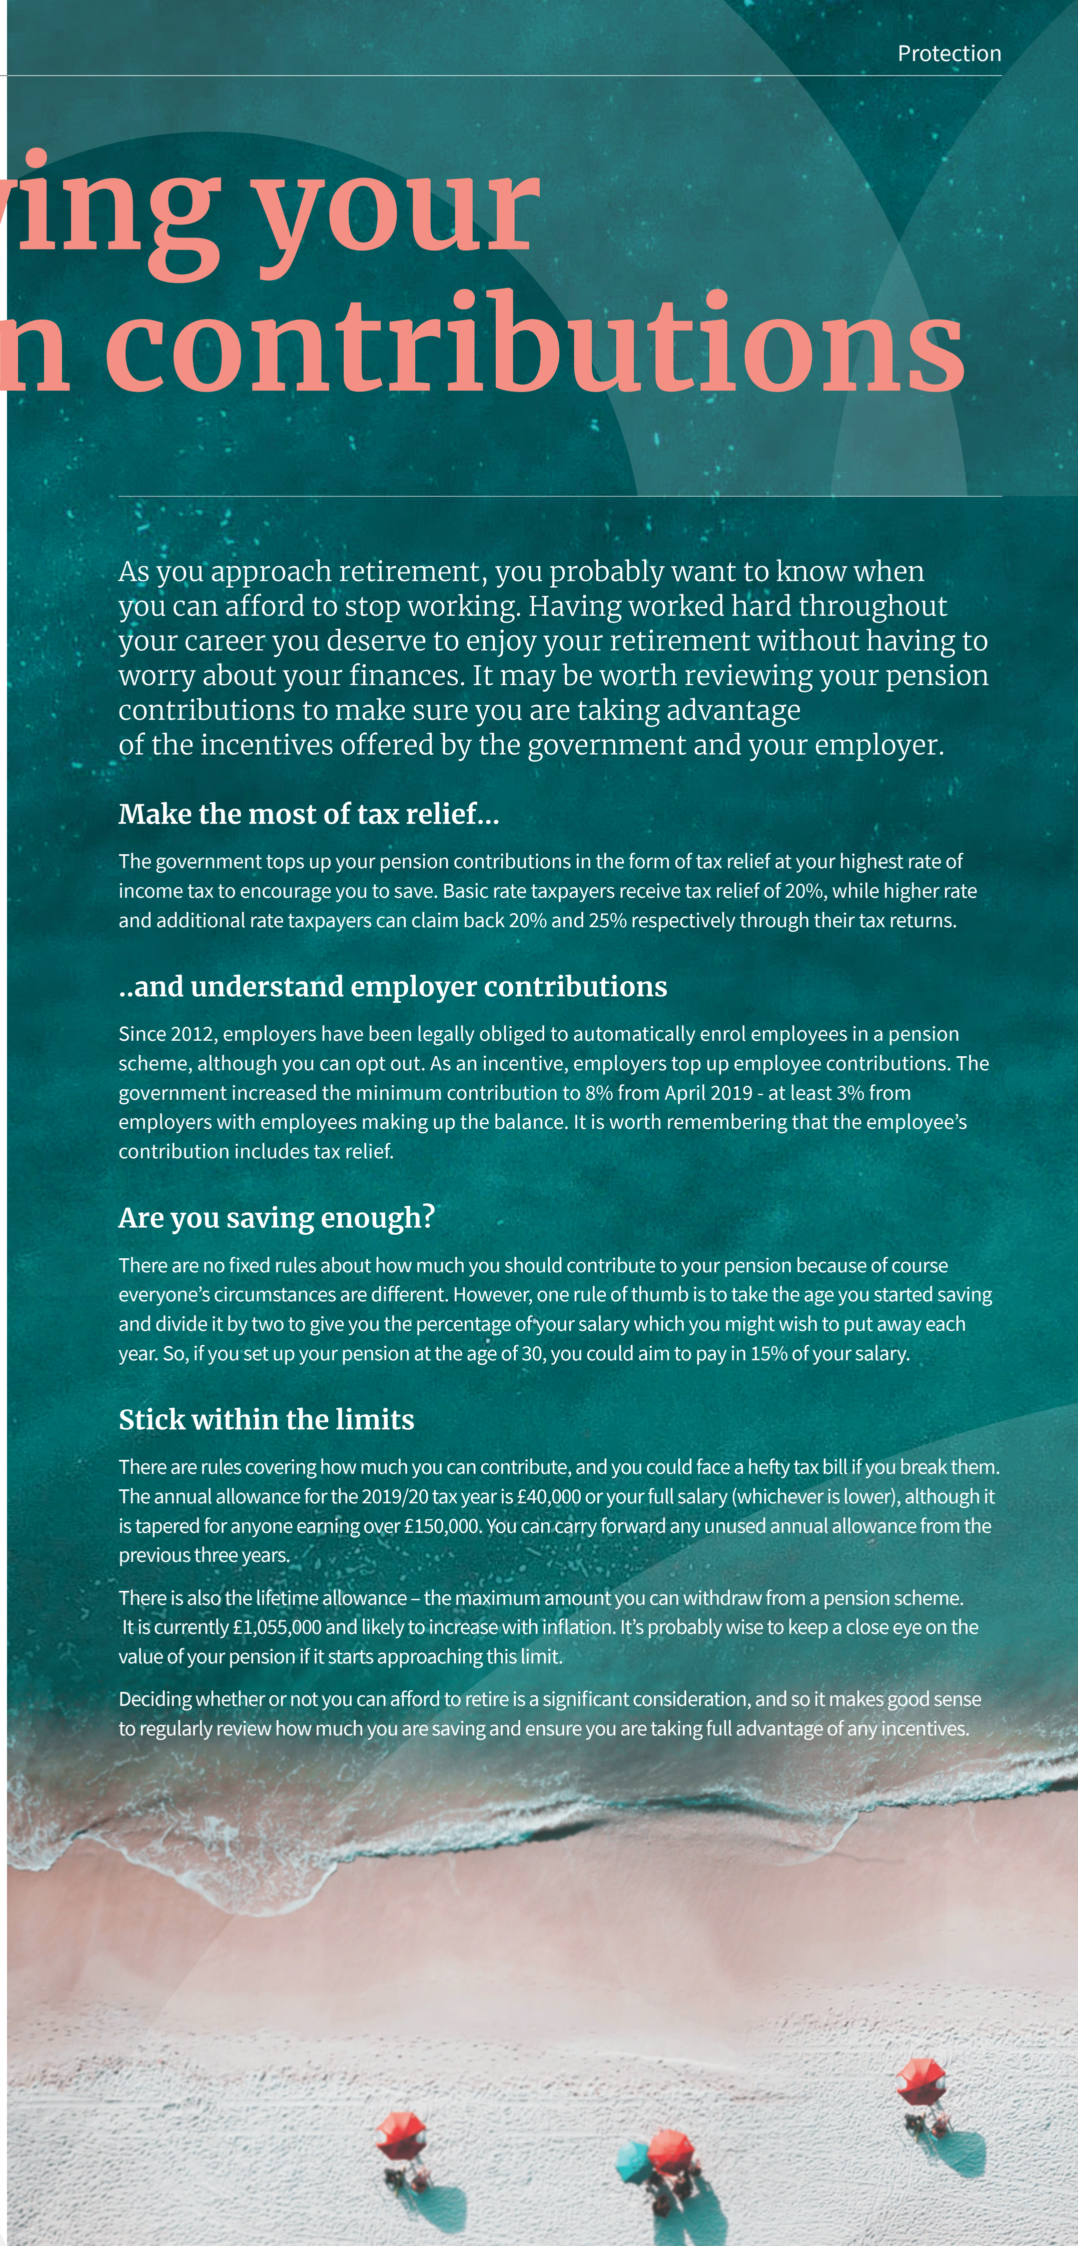
Gender pay gap
Pensions for women are £7500 less than mens on average and yet on average women live for three years longer than men.

A nation unprepared for retirement
Over half of the British population admits to either not saving for a pension or not saving enough for the retirement that they would like to live.

The rise of pensioners
In 1901, there were ten people working for every pensioner. By 2050 it has been predicted that there will be one pensioner to every two workers.

The value of your investments can fall as well as rise, and you may get back less than you invest.

HM Revenue and Customs practice and the law relating to taxation are complex and subject to individual circumstances and changes which cannot be foreseen.



As you approach retirement, you probably want to know when you can afford to stop working. Having worked hard throughout your career you deserve to enjoy your retirement without having to worry about your finances. It may be worth reviewing your pension contributions to make sure you are taking advantage of the incentives offered by the government and your employer.

Make the most of tax relief...

The government tops up your pension contributions in the form of tax relief at your highest rate of income tax to encourage you to save. Basic rate taxpayers receive tax relief of 20%, while higher rate and additional rate taxpayers can claim back 20% and 25% respectively through their tax returns.

..and understand employer contributions

Since 2012, employers have been legally obliged to automatically enrol employees in a pension scheme, although you can opt out. As an incentive, employers top up employee contributions. The government increased the minimum contribution to 8% from April 2019 - at least 3% from employers with employees making up the balance. It is worth remembering that the employee's contribution includes tax relief.

Are you saving enough?

There are no fixed rules about how much you should contribute to your pension because of course everyone's circumstances are different. However, one rule of thumb is to take the age you started saving and divide it by two to give you the percentage of your salary which you might wish to put away each year. So, if you set up your pension at the age of 30, you could aim to pay in 15% of your salary.

Stick within the limits

There are rules covering how much you can contribute, and you could face a hefty tax bill if you break them. The annual allowance for the 2019/20 tax year is £40,000 or your full salary (whichever is lower), although it is tapered for anyone earning over £150,000. You can carry forward any unused annual allowance from the previous three years.

There is also the lifetime allowance – the maximum amount you can withdraw from a pension scheme. It is currently £1,055,000 and likely to increase with inflation. It's probably wise to keep a close eye on the value of your pension if it starts approaching this limit.

Deciding whether or not you can afford to retire is a significant consideration, and so it makes good sense to regularly review how much you are saving and ensure you are taking full advantage of any incentives.
